DETAILED ACTION

1. This action is responsive to amendment filed 09/12/05.
2. Claims 1, 2, 4-9, 11-23 are pending in the application.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1, 2, 4-9, 11-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3, 5-12 and 14-17 of U.S. Patent No. 6,041,404 in view of Orenstein et al. (5,835,748).

Claim 1, the application claim 1 and the patent claim noted above are equivalently the same in scope and content except for the application claimed limitations a routine, which when executing by the processor, causes the processor to generate the data, the routine at least causing the processor to at least, access a first

data operand having a data element; however, Orenstein et al. teaches a packed data routine 540 for execution by the computer system 500 (col. 23, line 63 through col. 24, line 1). The difference between the application claim 1 and the patent claim 1 is an obvious variation; because the packed data routine is a sequence of instructions that includes one or more of the packed data instructions.

Claims 2, 4-9 and 11-23, the application claims and the patent claims are equivalently the same in scope and content.
